

Some of the territories that we worked together included the Providence Mts. in San Bernardino County, California; the New York and Ivanpah Mts.; the Granite Mts. near Victorville; the San Bernardino and San Gabriel Mts.; the Santa Monica Mts. and Palos Verdes Hills; the Southern Sierras near the South Fork of the Kern River; the High Sierras including the Mono Lake region and Bishop Creek; and the Colorado River district. In Arizona we spent considerable time collecting in the Tucson area and the Santa Catalina Mts. We also devoted many enjoyable days to field work on the upper Mojave Desert and the Pine Canyon district.

During his earlier activities INGHAM took several trips into the High Sierras and Northern California, collecting with ROBERT F. STERNITZKY and others.

On one occasion he struggled up to Mammoth Lakes in a Model T Ford by himself, over the road that in these days would be considered as "unimproved" and "dangerous but passable." North of the town of Mojave the car lost a bearing. INGHAM hiked across the desert to a deserted ranch house several miles to the east. There was a pile of Model T parts in the backyard. Luckily he found the right part, hiked back to the car, installed it, and was once again on his way, returning home a week later with many fine specimens from Mammoth.

INGHAM kept full records of all the specimens that he collected over a period of years and was very thorough and systematic in everything that he accomplished. JEAN GUNDER, in his publication "Butterflies of Los Angeles County", listed CHARLES H. INGHAM as one of the outstanding lepidopterists in the county. He also had races and aberrations named in his honor.

His publications have consisted of the description of a new race of *Anthobaris reakitii* occurring on Catalina Island — "*Anth. reakitii gunderi* Ingham"; an aberration of *Pieris beckerii* — "*P. beckerii ab. gunderi* Ingham"; and a joint authorship with LLOYD M. MARTIN on the "Butterflies of the Huntington Lake District."

All of us who knew CHARLIE miss him as a true friend, and when we are in some beautiful and remote desert region we can gaze at a distant peak and imagine his observing our collecting activities from the highest point, even though we can no longer detect his resounding "moose call."

He is survived by his wife, CARMEN; his children, JEAN, CHARLES, JOYCE, GAY, and MARK; and seven grandchildren.

CHRISTOPHER HENNE, 231 24th Place, Manhattan Beach, Calif., U. S. A.

NEW CODE OF ZOOLOGICAL NOMENCLATURE

Volume 14, Parts 1/6 and 7/9 of the *Bulletin of Zoological Nomenclature*, published in November 1957, contains the draft of the English text of the *International Rules of Zoological Nomenclature*, which is to be considered for adoption by the International Congress of Zoology meeting in London this summer. This text, if adopted, will supersede all earlier versions of the *Rules*. All systematists and other persons interested in problems of nomenclature would do well to obtain a copy of this draft, examine it carefully, and submit to the Secretary of the International Commission any comments or objections they may have. While it is unlikely that any code will be completely satisfactory to all zoologists, dissatisfaction and the need for further changes in the *Rules* should be reduced if all controversial questions are brought to the attention of the Commission and carefully considered before the draft is presented to the Congress for ratification. Copies may be obtained from the International Trust for Zoological Nomenclature, 41 Queen's Gate, London, S.W. 7, England.
