BRISTOL MUSEUM & LIBRARY,
QUEEN'S ROAD,
BRISTOL.

27th July 1889.

My dear Sir,

I am glad to be able to tell of any use to you.

Mr. Swayne brought your request before the Council, and it was acceded to on both points. He will probably write you shortly to that effect.

I will get drawings made for you, natural size of No. 58 "Coracoid" also of No. 100, and if of a humerus, the test there is, as soon as possible, and send them on to you by mail.

Looking at these bones, and the small amount of detail discernible in them, I presume you would be satisfied with a drawing made by
a few draughtsman, and that it will not be necessary to have them drawn by an expert. If I remember rightly this was the impression I got of your desire, when you were here.

I will also take out a series of the duplicate specimens of the bones of *Thecodontosaurus*, which we have and in a short time forward them to you. As you know they are but fragmentary, but for what they are I will do the best for you that I can.

The promised return in the form of casts of some of your rare fossils will be very acceptable to this museum.

Yours very truly,

Edward Wilson
Dear Sir,

I write to inform you that I have just delivered to the local shipping agents here (Clark Whitwell & Co.) a box of the Thedorothaurus remains from the Triassic dolomitic conglomerate of Durham House, Bristol.

The box will be shipped by the 'Jersey City', the agents for the Steamer on New York are Messrs Jas. Arbell & Co. 25 Whitehall St. The local agents could not undertake responsibility for carriage of your parcel past New York. They said however the New York agents above mentioned would attend to this. If the box does not reach you in due course, please inquire of the New York
Agents. The box is of course addressed to
you Professor O. C. Marsh
Yale College Museum
New Haven, Conn.
United States, America

I carefully went through the whole
of the duplicates you saw in the shed
at the museum, and selected 20 specimen
which I thought you would like best.
As you know, the tones are very
fragmentary, and our hopes much
more so the duplicates, but I have
given you the best we have of the latter,
selected in condition, variety, and some-
few, in the hope that further development
of undertaken, may yield some results.
The council sanction my sending you
these specimens, leaving it to you to give
us in return something you think will be
suitable for this collection of equivalent
worth.

Now as to the Sketches, - I am
sorry for the delay. at first i had to wait for a council meeting for formal sanction, then i tried. having attained this, i tried amongst the local artists, but they would not undertake to give a result that would be satisfactory; so i applied to the british museum friend, who employs specialist draughtsmen, and sent the specimen "no. 58" coracor, "no. 100", and the rest. of course we had, up to london.

here again there has been a tantalizing delay. i have written enquiring as to this, and my friend is urging them to finish the work. as soon as i receive the sketches, i will forward them to you.

the freight and portage of the
box of fossils from the Museum, & New
York to 13 1/6 which I have myself
paid. — I will also pay for the
sketches when made, and then let
you know the total amount you are
in my debt on this matter.

Meanwhile I trust the Wenandit
remains will reach you safely and
prove satisfactory.

Yours sincerely

Edward Wilson
15th April 1889

Dr. E. Wilson Esq.

To Pepper & Highley
137. Hungerford Road
London, W.

To draw in the figures of fossil tines

Received 2s. 6d. per dozen

Pepper & Highley
My dear Sir,

I now forward you the sketches of Thcodontosaurus bones in this Museum, which you desire, the same having only just arrived. I trust they will answer your purpose. They appear to me to be pretty accurate, and about as effective as the details as the nature of the bones would permit. I suggested that where matrix had to be shown, from its sticking to the bone it should be drawn as outline, but I see they have shaded it in, so I enclose a few tracings, to show you exactly which is bone & which matrix.

And remarks especially applies to No. 100. On the other side I send a few notes on the sketches & enclose an account of cost of their production & also of the carriage to the
Specimens to New York, and enclosed
the sketches, and received bills and
Sharnas receipt for one of specimens.
In case it is required to claim same

Yours very truly
Edward Wilson

No. 58 - There is a certain amount of
critical restoration in the details of this bone
the bulk of it, indeed nearly all of it, as you
probably remember is nearly a transverse
section, showing an irregular surface, but
then a less cone texture.

No. 96 - The shorter half of this bone
from the fracture where the hollow
central cavity of the bone is shown, is on
the original shown as a concave wound
the bulk of the bone of this distal end
lying in the other half of the block from
which this block containing this bone detached
has been split. - The distal end of this
Bone sketched, show more rounded curves not quite so angular in the concavity & convexity. It should also be understood that the left corner of the proximal end of this bone has a truncated aspect from being overlapped here by matrix.

Ch 100 - Do pretty correct. The flint-arrow-head-shaped patches in these figures is adherent matrix. The tracings show you reoutline the bone actually exposed and so far as the LEFT upper and lower figures are concerned, the true contours of these bones, the bone not from these points of view extending beneath the matrix.
