June 6th, 1892

Dear Professor Marsh,

Thank you very much for all the splendid contributions lately. I am especially interested in the one this morning, for I have a skull from Elgin in some respects like your Anchisaurus, in some respects more like Parrosaurus. The Elgin animal
very idle lately. I have
not even sent out the
little note on the Beida
Mammal: this I am
afraid will disappoint
you, for the truth is
very unsatisfactory.

On June 9th, I am
going again to Russia to
Scandinavia to see German
fishes, also for holidays in
the Baltic. I return on
July 17th.

My brother, who holds
a prominent position, is applied
Electricity) will probably call upon you sometime early this month, if able to stay at New Haven. I gave him a note I thought you could be so kind as to direct him to the park of the University he specially wishes to see.

My new dignity quite spoils systematic work -- there are so many small worries -- but I hope to have another volume of fishes early next year.

With kind regards, I renewed thanks.

Your sincerely,

Arthur Smith Woodward.

March 26th, 1896.

My dear Professor March,

Thank you very much for your interesting letter received this morning. There is now no palaeontological evidence of any kind to support the idea of the Cretaceous age of the Wealden. It only remains to see what stratigraphers will decide.

It will overcome difficulties about size splendidly.
if you can determine the
Brazilian quadrates to belong
to a Carnivorous Dinosaur.
That possibility did not
occur to me — I only
made sure of separating it
from the crocodiles, which
it does not agree. We will
have a cast made and send
you a copy.
I am very glad to
hear of the forthcoming memoir
on Dinosaurs, which is very
much wanted. I shall
study it with great interest.
I have had a set of my
papers waiting for you for some
time; I will send them at
once through the Smithsonian.
Unfortunately, I send copies
out very irregularly — my methods
are not very orderly.
I have not heard
anything of the editing of
Zittel's Grundzüge since you were
here. I suppose the translation
is still incomplete; I understand
to deal only with that.
It is very likely (not
guile settled) that I and
my wife will visit Argentina towards
the end of September. I shall
you spend your autumn holiday in that region? It could be an additional incentive to me to decide plans definitely. We should only be on land for about a fortnight. We have just bought all Somphino's wonderful birds, a splendid collection.

My wife unite in kind regards.

Yours Sincerely,

Arthur Keith Woodward

Professor Marsh, LL.D.

Yale University.
Jan. 13th. 1897.

Dear Professor Marsh,

I thank you very much for the beautiful present of the volume on Dinosaurs. I shall make great use of so interesting a compendium. Many thanks also for the paper on The Faunia of the Atlantic coast.
In the summer I sent to you through the Smithsonian a packet of my pamphlets up to date, which I hope you received. At the same time I through the same agency I also sent you the cost of the Mexican Cretaceous quadruped from Bacia. I should like to know that you think of the latter. If the de-
Finding strange things among those of the Cretaceous.

My wife unite in kind regards and best wishes for the New Year.

Yours Sincerely

*Signed* Ruth Goodwin

Professor C. C. Merrihew, F.D.
New Haven.
April 8th. 1897

My dear Professor Marsh,

I have only just seen Williston’s restoration of Phanodon, dated January. Do you intend to criticise it or publish another? I should like to have something of the kind for my book, but should prefer your version if you make one. I could keep back the Orthodon, if you think until the end of...
May or beginning of June, perhaps later by special request, for the books will probably not be issued before the end of September. The limits of the letterpress on my page are 4 inches wide by 6½ inches deep.

I look for another trout-fishing tour on the Continent on April 24th, and return on May 17th. Meanwhile most of the books will stand over.

I think it is the...
