### SATYRIUM BEHRII (LYCÆNIDÆ) IN OREGON

Prompted by the recent record of *Satyrium behrri* Edwards from Nevada (Philip, *Journ. lepid. soc.* 15: 56; 1961) the Reverend A. I. Good, of Wooster, Ohio, wrote to inform me of his capture of the species in Oregon, another of the states whence *behrri* was previously unreported (cf. Clench, in Ehrlich & Ehrlich, *How to know the butterflies*: 192; 1961).

Rev. Good took a single fresh male on 5 July 1961 at John Day (Grant Co.), the only individual he saw in nearly a month of collecting in the area. He has generously presented the specimen to Carnegie Museum.

E. J. NEWCOMER, of Yakima, Washington, has also reported in correspondence the capture of *S. behrri* in Oregon. He took it at two localities: Camp Sherman (Jefferson Co.), 22 July; and Pringle Falls (Deschutes Co.), 23 July. There is also a record of the species from Ft. Klamath (Klamath Co.) in the Museum of Comparative Zoology at Harvard.

HARRY K. CLENCH, Carnegie Museum, Pittsburgh 13, Penna., U. S. A.
