TWO RARE SPHINGIDAE FROM WESTERN PENNSYLVANIA

On 12 July 1961 I took a fresh male *Chlaenogramma jasminearum* (Guérin) 2 miles east of Morganza at Donaldson's Crossroads in Washington County. This specimen was caught flying around a gas station about 10:30 P.M. on a rainy night. On 30 July 1961, a warm clear night, JAMES MODERY took two fresh males at the same place. The year before, he also caught a worn female *C. jasminearum* just across the highway in July. During 1962, I caught two more male *C. jasminearum*, one at the same place as mentioned above, on 8 July. The other male, which was worn, was taken 14 July. The surrounding area is residential with small scattered woods. Ash trees are common in the area. According to TIETZ (*The Lepidoptera of Pennsylvania*: 24), the only known records of from the eastern part of the state.

A fresh male of the rare *Sphinx franckii* (Neumoegen) was taken by myself along Route 19 near Donaldson's Crossroads, Washington County on 6 July 1961. Another fresh male was taken at about the same place on 6 July 1962, and on 14 July 1962 JAMES MODERY caught a fresh male two miles east of Donaldson's Crossroads, the above locality. According to TIETZ, the only known previous record of *S. franckii* for the state was in Wayne, near Philadelphia.

The *C. jasminearum* caught 12 July 1961 and the *S. franckii* caught 6 July 1961 are both now in the Carnegie Museum.

RICHARD M. GILMORE, 105 McClintock Dr., Canonsburg, Penna., U. S. A.
