Panoquina confusa Mielke, new species Figs. 33, 34, 102–105

Male. Length of forewing: 16-17 mm. Externally coincides completely with the description of *Panoquina trix* Ev., being distinguished from this by male genitalia (see figs. 102-105). The author does not have any specimens of *P. trix* for a more detailed comparison.

Dorsal surface of forewing with opaque elongated yellowish spot in space 1b, hyaline white spots in spaces 2, 3, 4, 6, 7, and in the cell above internal angle of hyaline spot in space 2.

Ventral surface of forewing with the same spots, that of space 1b being broader;

Dorsal surface of hindwing with the spot of discal band of under side visible in spaces 2–5.

Ventral surface of hindwing with discal band in spaces 2–5 (paratype) or 6 (holotype); violet iridescence.

Holotype male, paratype male, Km. 222, Belo Horizonte-Brasília highway, Felixlândia, Minas Gerais, Feb. 20, 1966, collected by O. Mielke (holotype no. 8984).

THYMELICUS LINEOLA (HESPERIIDAE) IN INDIANA

Since the discovery of the first European skipper, *Thymelicus lineola* (Ochsenheimer), in North America around 1910, its distribution across the country has been noted with interest. Clench (1956, *Lepid. News*, 10: 151) gave a summary of its occurrence in North America, reporting the species in Ontario, Toronto, Michigan, New York, and Ohio. The last thorough paper on the distribution of this butterfly is that by Burns (1966, *Canad. Ent.* 98:859), Burns included Michigan, Ohio, New York, Pennsylvania, Maryland, New Jersey, and Connecticut in this country, plus New Brunswick, Ontario, and British Columbia in Canada. More recently the species has also turned up in Illinois (Irwin, 1968, *J. Lepid. Soc.*, 22:21).

On June 22, 1967 I collected one male *Thymelicus lineola* in a grassy pasture in North Manchester, Wabash County, Indiana. A female was collected in the same field on July 1, 1967. Both specimens were captured while at rest in the grass.

I am grateful to Dr. Frederick H. Rindge, Curator of Lepidoptera of the American Museum of Natural History, New York, for help with the literature and confirmation of my identification of the species as *Thymelicus lineola*.—Ernest M. Shull, 402 Wayne St., N. Manchester, Indiana
