O. C. Marsh.

Dear Sir,

Your letter of the 14th received, no pamphlet yet. would like to see one. I do not think these fish change any. as we have caught them from 2 inches to a foot in length. we now have ^{had} 2 of them in the office since about the first of August and there has been no change in them. there is a lizard here like them every way except they have no gills & we sometimes catch them in the water with the fish the lizards never show themselves only when it rains then the ground is covered with them we never find any of the fish, only on awany days then they are generally in the grass just at the water's edge never see them on land.

If convenient please send me the pamphlet.

Yours Respfully,
S. H. Cary
