

Dear sir

Philadelphia Feb. 5 1869

I sent you a paper on American
Geology a week since. Please let me
know if received. It will give me some
trouble to rewrite it. I think the

Discovery of the land period of the Miocene very
important and clearly defined. In addition to
the remarks on it I sent you I may add that

Emmons found ^{portions} Equus fraternus, Leidy in
a ^{miocene} marl Pit ^{near} at Elizabeth, Bladen Co. N. C.
and other specimens in the Miocene of Pitt Co.

Truly yours —

J. Aboumal
